THE POWERFLARE LED CAUTION LIGHTS

The Powerflare LED caution lights are all-purpose signal lights that can be used fast and easily in various emergency situations. An uncomplicated and fast marking with the Powerflare LED is essential for the safety in such cases. The caution lights have a wide range of use due to their compact size (\varnothing 10,5 cm, height: ~3,5cm) and the strongly sticking Neodym magnet. The useful LED caution light can indicate dangerous areas everywhere it is necessary. Besides the robust body, it is the LED technology that is the reason for its success. 16 extra bright LED lights provide the Powerflare caution light with high light intensity and visibility on a high range. By daylight the Powerflare can be seen from 300m, and 800m at night. The Powerflare LED light is water resistant and floats on the water surface, so it is a useful tool for divers and skippers as well. Over the water, the caution light is visible from stunning range of 15km. The performance package by Powerflare is convincing. The LED caution light can be used either with an easy exchangeable battery or with a Powerflare rechargeable battery (included recharger).

SPECIFICATIONS

- 16 extra bright LEDs with high light intensity
- the color of the LEDs accords to the color of the case
- fast deployable
- convenient size (diameter ~ 10,5cm; height ~3,5cm)
- strong magnet
- tough case made of extra strong plastic with flexible TPR-plastic cover
- Waterproof and floatable (suitable for divers and skippers)
- 9 different lighting settings/sequences
- visibility daytime: up to 300m
- visibility nighttime: up to 800m
- visibility water/air: up to 15km

SUPPLIED

BATTERY-VERSION:

- 1x Powerflare LED Caution Light
- 1x Battery

RECHARGEABLE BATTERY-VERSION:

- 1x Powerflare LED Caution Light
- 1x Rechargeable battery (inside)
- 1x Charging magnet
- 1x Charger for 230V
- 1x Charger for 12V
-

If transport damages have occurred or parts are missing, contact your dealer immediately.

FEATURES

- **Weight:** 212 g (without accessories)
- **Dimensions:** 3,5 cm height, 10,5 cm diameter (without accessories)
- **Storage Temperature:** - 40° C ~ + 89° C
- **Operating:** - 20° C ~ + 57° C
- **Battery:** CR-123 Photo battery or. rechargeable battery 3.7v Li-Ion 750mAh

The Powerflare LED warning light is equipped with a powerful Neodym magnet. Thus, it can be attached to all metallic surfaces. The magnet is mounted recessed so that no direct contact with the surface.

WARNINGS

Never look directly into the LEDs - this can lead to permanent damage to the eyes.

USE – RECHARGEABLE VERSION

Before switching the battery needs to be charged. Put the charging magnet in the middle of the back of the Powerflare LED caution light, so that the positive and negative poles have direct contact with the screw.

Always pay attention to the correct polarity. Plus and minus charge is found on the contacts on the housing, as well as on top of the magnet.

After preparation the charging magnets can be connected via the supplied power cable with the charger.

The charging time is approximately two hours. The charging activity is indicated by a status LED on the charging magnet. As long as the battery is charged, the LED is green. The last ten percent of the batteries are charging extremely slowly to conserve battery power. Thus, a continuous loading is possible. The status LED indicates after a long time, that the last 10% are loaded by the color changes to red.

STATUS-LED

- green → charging
- red → ready to use

After charging, the LED caution light can be switched on by using the ON / OFF switch at the top of the housing.

The rechargeable LED caution light should not be opened.

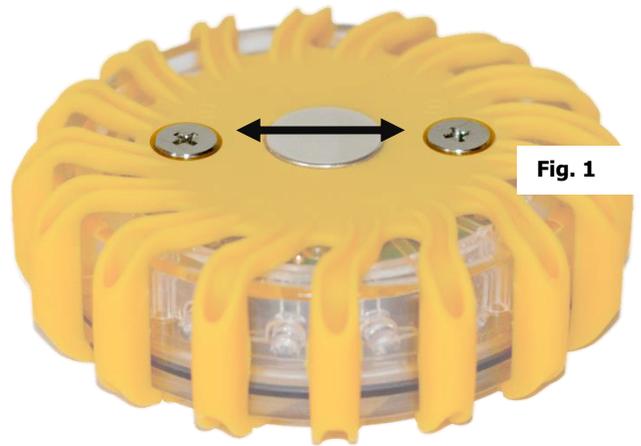

USE - BATTERY VERSION

1. OPEN HOUSING

To open the housing, the two aluminum screws (Fig. 1) must be solved counterclockwise with a suitable screwdriver on the back of Powerflare LED caution light.

Then the cover can be removed. Do this by pressing with your fingers against the four plastic tabs and remove the cover.

Caution! Don't use any tools for removing the cover. This can cause damage to the housing.

2. INSERT THE BATTERY

Insert the battery into the plastic bracket. Observe the correct polarity. Markings can be found on the plastic holder. To facilitate the next battery changing, the battery can be inserted into the annular rubber strap which can be found by opening the case in the plastic holder.

3. FUNCTION TEST

Now, a function test must be performed by gently pressing the button. The LEDs light up, the battery is inserted correctly. If no function is present, the seat and the correct polarity of the battery should be checked.

4. ASSEMBLING

Assemble the Powerflare LED caution light in reverse order - note the position of the plastic tabs. When donned the cover, make sure that the black seal ring slides smoothly into the case. Do not over tighten the aluminum screws as it could break off.

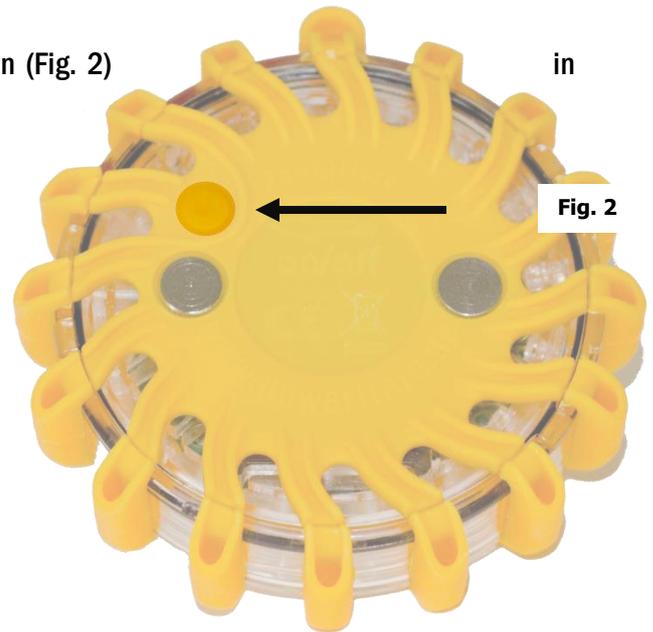

5. SWITCH ON

Press the ON / OFF button (Fig. 2) on the top of the housing.

OPERATION MODES

The operating modes are switched through the button (Fig. 2) in the following order:

1. Rotation
2. 3-way flash
3. 1-way flash
4. alternately
5. SOS-Mode
6. All LEDs permanently on
7. All LEDs permanently on bright
8. 2 LEDs permanently on
9. 4 LEDs permanently on
10. Off

MEMORY FUNCTION (SAVE STATE)

The current mode can be saved by pressing the button for 2 seconds. Saving is confirmed by 5-flashes of two LEDs. Next time the stored mode is active.

WAVELENGTH AND LIGHT LEVELS

- yellow (orange): 580nm / 6,000~9,000 mcd
- orange: 580nm / 6,000~9,000 mcd
- red: 655nm / 6,000~9,000 mcd
- blue: 464nm / 3,000~6,000 mcd
- green: 12,000 mcd
- white: compl. white spectrum / 13,000~16,000 mcd

TIPS FOR USE

Put the lights on the area / points you want to select. Make sure no sharp objects lie under the light. You can also use the caution light on a backpack, the uniforms or in the water. Use for attaching a carabiner.

OPTIONALES ACCESSORIES

- Powerflare boxes
- Powerflare replacement battery
- Nylon bags
- Replacement Charging sets
